WELCOME TO EXACT GLOBE NEXT!

This guide provides the information you need to work effectively with Exact Globe Next. It is part of the series of user manuals for Exact Globe Next. The goal of this documentation is to help you to get quickly acquainted with the product and the possibilities it offers. It will help all users, especially those without much experience with our software, to get started with and benefit from the product straightaway.

Exact Globe Next is an integrated software solution; its modules of related business processes function together in an integrated manner. Besides the user manuals, there are several information sources, related to the software, available to you. You can access online help documents on Exact Globe Next features while working with the software by just pressing the F1 key. The list of help document also contains release notes related to the product. They inform you of the improvements and functional additions in the various releases of the product.

You can also access the help documents, release notes and other related documents online through the Exact Customer Portal on www.exact.com. The Customer Portal is a protected part of the Exact Software internet site, which has been specially developed to provide you with information and to help you get the maximum yield from your software. This portal informs you about our contacts, downloads, FAQs, and the latest product news. We invite you to use the portal as often as you wish!

Thank you for using Exact Globe Next and this user manual!

1. INDIRECT TAXES AND TAXING METHODS

Indirect taxes are taxes not based on profits of companies. Exact Globe Next can handle or supports a number of indirect taxes in various countries. You should note that countries are referred to as legislations in the Exact Globe Next. Exact Globe Next supports the following types of indirect tax and taxing methods.

1.1 VALUE ADDED TAX (VAT)

Among the most common indirect tax is the VAT or value added tax in the European Union (EU). VAT is a general consumption tax. It is assessed on the value added to goods and services. It is a general tax because it applies to all commercial activities involving the production and distribution of goods and the provision of services. It is a consumption tax as it is eventually borne by the end-consumer. VAT is therefore not a charge on companies. It is charged basing on a percentage of price, therefore the actual tax burden appears in every stage of the value chain from procurement, production to distribution. VAT is collected fractionally, through a system in which taxable or VAT-registered businesses deduct from their VAT liability the amount of tax they have paid to other taxable businesses on purchases for their business activities. This mechanism ensures that the tax is eventually paid by the end-consumer regardless of how many transactions are involved.

1.2 GOODS AND SERVICES TAX (GST)

GST or goods and services tax is similar to VAT. GST is just another term used for general consumption tax in some countries, such as Australia, Canada, and Singapore. As such, it is known as GST in Exact Globe Next for countries (which are called legislations in the system) where it is applicable; but it is treated the same way as VAT. Therefore, for more information on GST of most countries, you can refer to Chapter 2 although it describes VAT. Chapter 3, "Goods and services tax (GST)" describes the GST of Canada.

1.3 SALES TAX

Sales tax is imposed usually as a percentage of the sales amount. The sales tax that appears in Exact Globe Next and described in Chapter 4 refers to the sales tax applicable in the USA. In the USA, sales tax is usually imposed on the sales of personal tangible assets and consumption of goods and services. The sales tax applicable depends on the tax jurisdiction concerned. It depends on the location where the transaction takes place and it can involve more than one tax, for example, local area tax or city tax, state tax, and country tax.

1.4 TAX WITHHOLDING

Tax withholding is a method of paying certain tax to the authority. In this case, it is the duty of the purchaser that receives the taxable goods or services to withhold the tax amount. When paying the supplier, the purchaser deducts the tax amount from the invoice amount and withholds it for the tax authority.

1.5 PER-UNIT TAXING

There are taxes that are calculated basing on the sales quantity – the number of units sold – instead of on a percentage of the sales amount. Such method of per-unit taxing is found in ecological taxes, where taxes are imposed for ecological reasons. Exact Globe Next supports the per-unit taxing method for countries where it applies through a special tax module that handles a number of taxes.

2. VALUE ADDED TAX (VAT)

The following describes how Exact Globe Next handles multiple taxes including value added tax (VAT).

The chapter has the following sections:

- VAT Settings
- VAT Codes
- Linking Tax Codes
- Entering Tax Codes
- VAT Returns
- VAT Functionalities for Specific Countries

2.1 VAT SETTINGS

The system provides you with the VAT functionality when it is installed. If you do not require the VAT functionality, you can disable it during the first set up after installing the system. Once the VAT functionality is used, it cannot be disabled. If you require the VAT functionality in the system, you must first set it up. The following describes how to disable the VAT functionality and how to set up the special tax module (mentioned in Per-unit Taxing) that handles various taxes including VAT. Note that some settings are only available for systems with tax module.

To disable the VAT functionality

1. During the first set up after installing the system, go to System → General → Settings.
2. Under **Settings** (on the left), click **General ledger settings**.
3. Under **Entry**, click to select **Disable VAT** check box (if it is available).
4. Click **Save**; the message "Changes will only take effect after restarting the software" appears.
5. Click **OK** and then **Close**.

Note:

VAT functionality is available when the system is installed. You cannot disable it when any VAT function has been used.

To do VAT settings

1. Go to System → General → Settings.
2. Under **Settings** (on the left), click **General ledger settings**.
3. Under **Entry**,
 - In the **VAT type** box, select either **Invoice system** or **Cash system**.
 - If you want to use the tax module (including per-unit taxing handling), select the **Use tax module** check box.
 - In **Show: Maximum number of tax codes**, type the maximum number (**1 to 5**) of tax codes (each represents a tax) shown in the system.
 - If non-deductible VAT is applicable, select the **Non-deductible VAT** check box.
 - If extra duty is applicable, select the **Extra duty** check box.
4. Click **Save**; the message "Changes will only take effect after restarting the software" appears; click **OK** and then **Close**.

2.2 VAT CODES

Each VAT is represented by a code. The VAT code 0 (VAT 0%) or no VAT is provided by the system by default. VAT can be exclusive or inclusive depending on how it is charged.

Note:

The phrase "VAT code" here refers to the particular VAT that carries that code and rather than the code itself.

The screenshot shows a software window titled "VAT codes" with a red header bar. Below the header is a menu bar with "007", "File", "Edit", and "Help". A toolbar contains icons for adding, saving, undo, redo, copy, paste, and zoom. The main area is divided into two sections. The top section contains fields for "VAT code" (92), "Description" (VAT 19% excl.), "Transaction type" (Both), "Purchase VAT return type" (N/A), "Percentage" (19.00), and "VAT % description" (BTW 19% excl.). The bottom section has tabs for "General", "EU", "VAT boxes", and "Log". The "General" tab is active and shows fields for "VAT type" (Excluding), "VAT charged" (checkbox), "VAT 0% exemption" (checkbox), "Extra duty percentage" (0.00), "VAT to pay account" (1502), "VAT to claim account" (1511), "Creditor" (60085 Belastingdienst CBA Apeldoorn), and "Payment" (Monthly). At the bottom right are buttons for "Save", "New", and "Close".

VAT code	92
Description	VAT 19% excl.
Transaction type	Both
Purchase VAT return type	N/A
Percentage	19.00
VAT % description	BTW 19% excl.

General	EU	VAT boxes	Log
VAT type	Excluding		
VAT charged	<input type="checkbox"/>		
VAT 0% exemption	<input type="checkbox"/>		
Extra duty percentage	0.00		
VAT to pay account	1502		
VAT to claim account	1511		
Creditor	60085	Belastingdienst CBA Apeldoorn	
Payment	Monthly		

Save New Close

2.2.1 Creating and Maintaining VAT Codes

You create new VAT codes and maintain them through System → General → Countries → Tax codes. The following describes how:

- To print the report of VAT codes
- To create a new VAT code
- To edit a VAT code
- To delete a VAT code

To print the report of VAT codes

1. Go to System → General → Countries → Tax codes and click **Report** (a print preview of the report appears).
2. If you want to do printer settings, click **Printer settings**.
3. Click **Print** to print the report.
4. Click **Close** to exit.

To create a new VAT code

1. Go to System → General → Countries → Tax codes and click **New**.
2. Fill in the required details (see 2.2.2 *Further Details* that follows).
3. Either:
 - Click **New** to specify another new VAT code with steps 1 and 2.
 - Click **Save** and then **Close**.

To edit a VAT code

1. Go to System → General → Countries → Tax codes.
2. Click the required VAT (row) and click **Open**.
3. Fill in the required details (see 2.2.2 *Further Details* that follows).
4. Click **Save** and then **Close**.

To delete a VAT code

1. Go to System → General → Countries → Tax codes.
2. Click the required VAT (row) and click **Delete**.
3. A message appears, click **Yes**.
4. A message appears indicating that the VAT code has been deleted.
5. Click **Close**.

Note:

Once a VAT code has involved in any transaction in the system, it cannot be deleted. Reasons of why it is not deleted appear in the message after clicking **Yes**.

2.2.2 Further Details

When creating and editing VAT codes, you need to enter the following details.

VAT code

When creating a new VAT code, type a unique three-character code for the new VAT code. Once it is saved, the box is not available.

Tax type

Select **VAT**.

Description

Type a suitable description (up to 30 characters) for the VAT code, for example, **VAT 19% exclusive**.

Transaction type

This is only available when creating a new VAT code, select one of the following:

- **Both**, if the VAT code is applicable to both purchase and sales transactions.
- **Purchase**, if it is applicable to only purchase transaction.
- **Sales**, if it is applicable to only sales transaction.

Purchase VAT return type

When it is available, select one of the following:

- Goods
- Services
- Investment

Percentage

Type the appropriate number for the VAT percentage.

Percentage non-deductible VAT

This is only available if you have selected the **Non-deductible VAT** check box under **General ledger settings** (see 2.1 *To do VAT settings* earlier), type the appropriate number for the non-deductible VAT percentage.

VAT% description

Type a description for the VAT percentage (up to fifteen characters).

General Tab

You enter general details about VAT here.

VAT type

Select one of the following:

- Excluding
- Including
- N/A

VAT charged

This is only available if you have selected **Purchase** for **Transaction type**, select the check box if VAT is charged during a purchase. Once you have selected the **VAT charged** check box, then **VAT type** takes on the **Excluding** option, and the system automatically handles the related transactions of VAT to be paid and VAT to be claimed, and no tax amount is shown in the VAT return. For more information about:

- Implementation of VAT charged in financial entries, see document 04.670.198 in your e-Synergy system.
- VAT charged without VAT to be claimed, see document 05.200.382.

VAT 0% exemption

Select the check box if VAT exemption is applicable.

Extra duty percentage

This is only available if you have selected the **Extra duty** check box under **General ledger settings** (see 2.1 *To do VAT settings* earlier), type the appropriate number for the extra duty percentage. For more information on extra duty in Spain, see document 05.796.451.

VAT to pay account

Type or select the general ledger account to register VAT to be paid.

Non-deductible VAT account

This is only available if you have selected the **Non-deductible VAT** check box under **General ledger settings** (see 2.1 *To do VAT settings* earlier), type or select the general ledger account to register non-deductible VAT. For more information on nondeductible VAT for:

- Portugal, see document 08.816.004 and 09.311.929
- France, see document 06.232.383 and 08.539.002
- Other related countries, see document 05.503.483

VAT to claim account

Type or select the code of the general ledger account to register VAT to be claimed.

Creditor

Type or select the code of the creditor general ledger account for tax authority. Tax authority is treated as a creditor in the system for paying and claiming VAT.

Payment

Select one of the following payment frequencies:

- Monthly
- Quarterly
- Yearly

EU Tab

You enter details relating to EU (European Union) sales list here.

EU sales list

Select one of the following:

- Triangulation
- No listing
- Listing
- Listing goods to be processed

EU listing country

Type or select the code of the EU listing country.

VAT boxes

You need to link a VAT codes to the appropriate set of VAT boxes to generate the required VAT return. The following describes how:

- To add a new VAT box
- To edit a VAT box
- To delete a VAT box

To add a new VAT box

The screenshot shows the 'VAT codes' application window. The 'VAT boxes' tab is selected, displaying a table of VAT boxes. A red box highlights the '+ New' button in the top left corner of the table. The table has columns: Return boxes, Description, Box type, Positive negative, Exclude from VAT return, Excl. from total in VAT Overview, id, and id. The table contains three rows of data.

Return boxes	Description	Box type	Positive negative	Exclude from VAT return	Excl. from total in VAT Overview	id	id
1	Vat Output on sales	VAT to pay	Positive			37	313
2	Vat Due from other EC Member stati	VAT to pay	Positive			38	314
4	Vat Reclaimed On Purchase (incl. EC VAT to claim		Negative			39	316

At the bottom right of the window, there are three buttons: 'Save', 'New', and 'Close'.

1. In the **VAT boxes** tab, click **+ New**.
2. In **VAT box**, type or select the required VAT box.
3. In **Pos/Neg**, select either **Positive** or **Negative**.
4. Click **Save**.

To edit a VAT box

1. In the list box of the **VAT boxes** tab, click to select the required VAT box (row).
2. Click **Edit**.
3. In **Pos/Neg**, select either **Positive** or **Negative**.
4. Click **Save**.

To delete a VAT box

1. In the list box of the **VAT boxes** tab, click to select the required VAT box (row).
2. Click **Delete**.

Log Tab

You can see a log of the changes done to the VAT code here. Each row of the list shows the field name involved in the change; its old and new values before and after the change; the full name of the person who made the change, and the date and time of the change.

2.3 LINKING TAX CODES

You have to link the specified tax codes to the related items and general ledger accounts to involve them in sales and purchase transactions.

The following covers the topics of:

- Linking tax codes to items
- Linking tax codes to accounts receivable and accounts payable
- Linking tax codes to general ledger accounts
- Automatic linking of tax codes

2.3.1 Linking Tax Codes to Items

Tax codes can link to both sales items and purchase items.

The following describes how:

- To link a tax code to a sales item
- To link multiple tax codes to a sales item
- To link a tax code to a purchase item
- To link multiple tax codes to a purchase item

To link a tax code to a sales item

The screenshot shows the '007 Items - Exact' window with the 'Basics' tab selected. The 'Sales VAT code' field is highlighted with a red box, showing the value '0'. The 'Standard VAT code' field is also highlighted with a red box. The 'Multiple taxes' button is visible below the 'Sales VAT code' field. The 'Assortments' section shows 'Type', 'Productgroep', and 'Soort' dropdowns. The 'Attributes' section shows 'Text' and 'Divisible' checkboxes. The 'Text' field contains 'Bonen Brazilian Regular'.

1. Go to one of the following:
 - Invoice → Items → Maintain
 - Order → Items → Maintain
 - Inventory → Items → Maintain
 - Purchase → Items → Maintain
 - Project → Items → Items
 - Manufacturing → Setup → Items
 - Service → Items → Maintain
2. Either:
 - Click **New** for a new item.
 - Select the required existing item (row), and click **Open**.
3. In the **Basics** tab, in the **Sales VAT code** box, enter the required VAT code.
4. Click **Save**.

1. Select the **Use tax module** check box under **General ledger settings** (see 2.1 *To do VAT settings earlier*).
2. Follow steps 1 and 2 of *To link a Tax code to a sale item*.
3. In the **Basics** tab, click the **Multiple taxes** button.
4. In **Tax schedule**, in the **Basics** tab, fill in the following details:
 - Under **Criteria**, in **Country code**, enter the required country code; and in **Transaction type**, select **Sales**.
 - Under **Tax**, enter the required number of tax codes.
5. Click **Save**.

Note:

The maximum number of tax codes that appears in the **Tax schedule** is specified in Show: **Maximum number of tax codes** under **General ledger settings** (see 2.1 *To do VAT settings earlier*). The tax codes of tax modules information is keep in System → General → Countries → Tax schedule.

To link a tax code to a purchase item

The screenshot shows the '007 Items by supplier - Exact' window. The 'Purchase' tab is active. The 'VAT' field is highlighted with a red box, showing the value '1'. Below it, a 'Multiple taxes' button is also highlighted with a red box. The 'Purchase' section includes fields for Purchase unit (Doos), Currency (EUR), Price (130.000 EUR / Doos), PO size (1.000 Doos), Time of delivery (2 Days), and Country of origin. The 'Sales' section includes Sales unit (kg) and Purchase price (10.833 EUR / kg). The window has a menu bar (File, Edit, Help) and a toolbar with various icons. At the bottom right, there are 'Save', 'New', and 'Close' buttons.

1. Follow steps 1 and 2 of *To link a Tax code to a sales item*.
2. Go to the **Purchase/Sales** tab, in the **Suppliers** list, click the required supplier of the item.
3. Click the  **Edit** button.
4. Under **Purchase**, in **VAT**, enter the required VAT code.
5. Click **Save**.

Save New Close

1. Select the **Use tax module** check box under **General ledger settings** (see 2.1 *To do VAT settings* earlier).
2. Follow steps 1 and 2 of *To link a tax code to an account payable*.
3. In the **Financial** tab, click the **Multiple taxes** button,
4. In the **Basics** tab of **Tax schedule**, fill in the following details:
 - Under **Criteria**, in **Country code**, enter the required country code; and in **Transaction type**, select **Purchase**.
 - Under **Tax**, enter the required number of tax codes.
5. Click **Save**.

2.3.3 Linking Tax Codes to General Ledger Accounts

You can link tax codes to general ledger accounts if the tax module is not used - that is the **Use tax module** check box under **General ledger settings** is clear (see 2.1 *To do VAT settings* earlier). Once that is done, tax codes are automatically selected when you enter the related transactions into the system.

To link a tax code to a general ledger account

The screenshot shows the '007 Maintain accounts - Exact' window. The account is '1757 - VAT to be received'. The 'Extra' tab is selected. The 'Tax code' field is highlighted with a red box, showing the value '0' and a search icon. The 'Presentation' field is set to 'Standard'.

Basics	Cost centres/cost units	Budgets	Cost centres	Cost units	Warehouse	Extra	Log
Cash flow statement	Unknown					Presentation: Standard	
Inv. Register type	Purchase					Tax code: 0	

1. Go to Finance → General ledger → Chart of G/L's.
2. In the list, click the required general ledger account (row).
3. In the **Extra** tab, in **tax code**, enter the required tax code.
4. Click **Save** and **Close**.

2.3.4 Entering Tax Codes

You can either manually enter or use the automatic entered or default tax codes (for more information on how the system selects the default tax codes, see *Appendix I: Default Tax Codes*). Once you have entered the tax codes or use the default tax codes, generally, the system immediately does all the tax-related calculations and displays the results on screen. The following describes how:

- To enter a tax code in a sales order (sales invoice)
- To enter multiple tax codes in a sales order (sales invoice)
- To enter a tax code in a sales journal entry
- To enter multiple tax codes in a sales journal entry

2.3.5 VAT Returns

You need to do the following steps before you generate a VAT return and the finally the printing of VAT report.

- To link VAT codes to VAT boxes
- To enter sales and purchase transactions with VAT codes
- To check the VAT related transactions
- To view the VAT return
- To assign a period to VAT returns
- To generate a VAT return
- To print the report of VAT returns

To link VAT codes to VAT boxes

- See 2.2.2 Further Details under VAT boxes.

To enter sales and purchase transactions with VAT codes

- See Tax Code Entries earlier.

007 VAT-Invoice list - Exact

007FileEditViewHelp

</

To check the VAT related transactions

1. Go to Finance → VAT/Statistics → Invoice list and select **Invoice list**.
2. Under **Range**, select the required details as follows:
 - Select to list the invoices based on either:
 - **Date** (entry dates)
 - **Reporting date**

- In **Reporting date**, enter a date range or use all dates.
 - In **Type**, select either **Supplier** or **Customer** for the type of invoices required.
 - Select:
 - **Purchase invoice** check box to include purchase invoices in the list
 - **Purchase credit note** check box to include purchase credit notes in the list
 - **Other** check box to include other invoices in the list
 - In **Check**, select one of the following:
 - **All** to include all the invoices
 - **Yes** to include only the checked invoices
 - **No** to include only the unchecked invoices
 - Select the **VAT invoices** check box to include the VAT invoices.
3. Click **Display** and check the list of invoices displayed.

VAT to pay	0.00	178,394.40
VAT to claim	0.00	57,153.78
To be paid	0.00	121,240.62

- Go to Finance → VAT/Statistics → VAT overview.
- Under **Range**, select the required details as follows:
 - In **Date**, enter a date range or use all dates.
 - In **Cost center**, select a range of call centers or all cost centers.
 - In **Method**, select either the **Cash system** or **Invoice system** of VAT.
 - In **VAT return**, select one of the following:
 - **All** to include all VAT entries
 - **Assigned** to include only VAT entries with assigned periods
 - **Final** to include only the final VAT entries
 - **No** to include only non-final VAT entries
- Click **Display** and view the list of VAT entries.

To assign a period to VAT returns

1. Go to either:
 - **Invoice list** through Finance → VAT/Statistics → Invoice list.
 - **VAT return** list through Finance → VAT/Statistics → VAT overview.
2. Either:
 - Click to select one unassigned VAT entry (row).
 - CTRL+click to select many VAT entries (rows) together.
3. In **Return period**, select the required return period month.
4. Click **OK** to assign the period.
5. The message "Do you want to overwrite existing data?" appears; click **Yes** to overwrite the existing data.

2.4 VAT FUNCTIONALITIES FOR SPECIFIC COUNTRIES

There are various VAT functionalities that applied to specific countries. For example, if your software license is for the Netherlands and includes the Accountancy module, it allows you to generate VAT return for multiple companies.

2.4.1 VAT Return for Multiple Companies

The accountant uses the Accountancy module of Exact Globe Next to monitor and control the accounts managed by the clients. The accountant can be a third-party consultant who provides service to his or her clients. The accountant can be an executive in the head office of the holding company who oversees the accounts of subsidiary companies. The system for the Netherlands allows you to generate VAT return for multiple companies together by the accountant.

To view a VAT return for multiple companies

- Go to Accountancy → Customer info → Finance.

An example of the VAT return for multiple companies is shown as follows. Information shown for each row includes the customer, company database and action (such as bank, sales, purchase, or VAT return) involved. Colors and words are used to indicate the status of the tax returns.

Customer	Name	Database	Action	1	2	3	4	5	6	7	8	9	10	11	12	Checked
1000 Flopshop BV			Not defined													
1100 Hard & Soft		932	Bank / Cash	1	3											4/4/2012
			Inkoop	5	6	3										4/4/2012
			Verkoop	4	2	3										4/4/2012
			General journa	2	2	1	6	6	6	5	5	5	5	5	5	4/4/2012
			BTW aangifte	Open												4/4/2012
1200 Ursus Major		902	Bank / Cash													4/4/2012
			Inkoop													4/4/2012
			Verkoop													4/4/2012
			General journa													4/4/2012
			BTW aangifte													4/4/2012

Legend

- Orange: Open - the accountant has not accepted or has reopened the client's VAT return.
- Green: Realized - the accountant has accepted the client's VAT return.
- Red: Rejected - the accountant has rejected the client's VAT return.

Buttons: Refresh, Send, Start, Import stateme..., XBRL - Balance, Plan, Update statistics, Process, XBRL - Taxonomy, Edit, Close.

Colors are used to indicate the actions taken by the accountant as follows:

- Orange means *Open* - the accountant has not accepted or has reopened the client's VAT return.
- Green means *Realized* - the accountant has accepted the client's VAT return.
- Red means *Rejected* - the accountant has rejected the client's VAT return.

Words are used to indicate the actions taken by the tax authorities as follows:

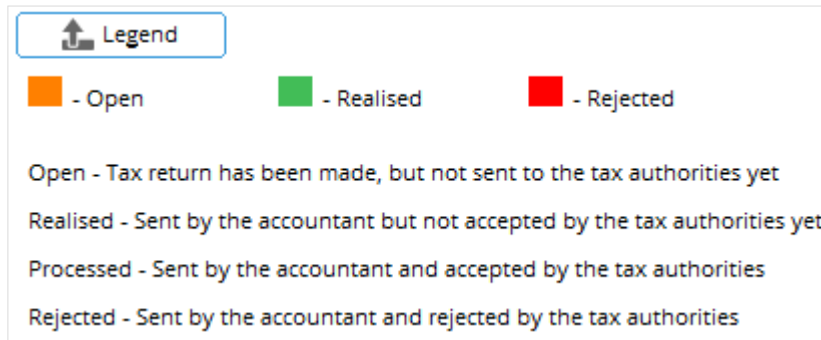

- Open** - the tax return has been generated but it has not been sent to the tax authorities.
- Realized** - the accountant has sent the tax return but the tax authorities have not to accept it.
- Processed** - the accountant has sent the tax return and the tax authorities have accepted it.
- Rejected** - the accountant has sent the tax return but the tax authorities have reject it.

You can get the descriptions of the colors and words used by clicking the **Legend** button.

To view the legend descriptions

1. Go to Accountancy → Customer info → Finance.
2. Click **Legend**.

The following appears on screen showing what the colors and actions mean.

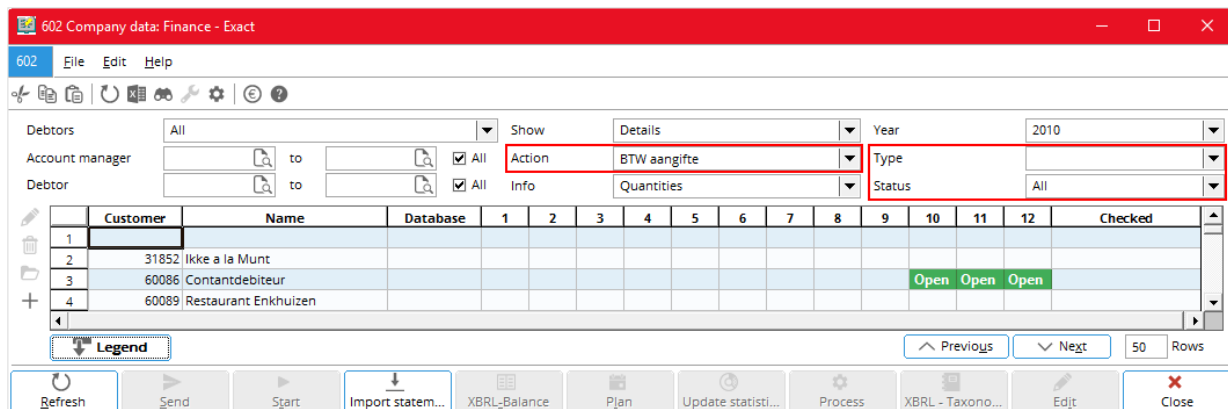

To allow you to display on screen certain types (monthly, quarterly, yearly or all) and status (open, realized, rejected or all) of VAT returns for selection, you have to make the **Type** and **Status** option boxes available.

To make the Type and Status boxes available

1. Go to Accountancy → Customer info → Finance.
2. In the Action box, select **VAT return** (or **BTW aangifte** in Dutch).

Then the **Type** and **Status** boxes are available as shown below.

To view a VAT return before sending

1. Go to Accountancy → Customer info → Finance.
2. Double-click the cell marked with **Open** of the require VAT return.

The screen details of the VAT return are similar to those available through Finance → VAT/Statistics → Value added tax.

To send the VAT returns for multiple companies

1. Go to Accountancy → Customer info → Finance.
2. Select the options to display the required VAT returns (see 2.2.2 Further Details).
3. Click or CTRL+click to select one or more VAT returns (orange or green cells marked with **Open**) to be sent.
4. Click **Send**.

Note:

The **Send** button is only available only when you select an orange or a green cell marked with **Open**.

2.4.2 Further Details

When selecting VAT returns to be sent, you can use the selection options to list the required VAT returns.

Debtor

Enter the range of required debtors or select the **All** check box for all debtors.

Type

Select one of the following frequencies:

- **Monthly**
- **Quarterly**
- **Yearly**
- *Blank (for all)*

You can define the type of VAT return for each client by clicking the **Edit** button on the left edge of the list box of **Accountancy/Customer info/Finance or Accountancy/Customer info/Company data**. You then use the **Type** box to select the type of VAT return required to be displayed for selection.

Other VAT Functionalities

Read the following documents (in your Exact e-Synergy system) for information on VAT functionalities specific to particular countries.

Document ID	Document title and description	Countries applicable
09.653.763	<i>VAT Processing from Prepayments (Russia)</i> VAT due to a prepayment is registered in a suspense account before the delivery of goods and invoice to prevent frauds.	Russian
09.612.391	<i>China VAT Calculation Methods</i> An extra option of <i>Inclusive: Net</i> is added for China.	China
09.599.264	<i>Moving Belgium VAT Functionality into the Standard One in Globe</i> Changes done to replace the VAT functionality for Belgium with the standard from Exact Globe Next	Belgium
09.560.222	New Menu Finance → VAT/Statistics → Process tax invoice of Thailand A new functionality is added to calculate VAT and tax withheld (for both sales and purchase) when the invoice is paid.	Thailand
09.366.852	VAT Revaluation and VAT Official Exchange Rates for the Czech Republic The system calculates (using the exchange rates) and displays VAT values based on fulfillment dates instead of entry dates or reporting dates.	The Czech Republic

Document ID	Document title and description	Countries applicable
08.506.348	<i>Adjustments in Electronic VAT Return</i> Additional Change and Reset buttons to modify a trial VAT return before generating the final VAT return.	The Netherlands
08.459.251	<i>VAT Official Exchange Rates</i> The system calculates VAT values using the latest updated exchange rates at System → Countries → Exchange rates.	Germany, Romania, Czech Republic, United Kingdom, and Slovak

3. GOODS AND SERVICES TAX (GST)

Goods and services tax or GST is similar to VAT. GST is just another term used for general consumption tax in some countries, such as Australia, Canada, and Singapore. For most of the countries, GST works the same way as VAT. Therefore, although the tax is known as GST in Exact Globe Next for countries (known as legislations in the system), it is treated the same way as VAT as described in Chapter 2, "Value Added Tax (VAT)."

In Canada, GST is commonly known as sales tax. It is different from GST of other countries in certain ways, such as settings and data entered. Most of the aspects of GST in Canada are same as VAT, and they have been covered in Chapter 2.

This chapter covers the differences of the GST in the following topics:

- GST settings
- GST codes
- Linking tax codes
- Entering tax codes

3.1 GST SETTINGS

As for VAT, you also do the settings for the Canadian GST in System → General → Settings → General ledger settings. The **Show: Maximum number of tax codes** and **Use tax module** settings are available. You can do the settings as follows.

General ledger settings

VAT

Disable VAT ☐ Use tax module ☒

Flexible VAT system ☐ Show: Maximum number of tax codes

VAT type Non-deductible VAT ☐

Use separate GL to close VAT balances ☒ Assortment for tax use ☒

GL to report VAT VAT

To do GST settings

1. Go to System → General → Settings.
2. Under **Settings** (on the left), click **General ledger settings**.
3. Under **Entry**,
 - If you want to use the tax module (including per-unit taxing handling), select the **Use tax module** check box.
 - In **Show: Maximum number of tax codes**, type the maximum number (**1 to 5**) of tax codes (each represents a tax) shown in the system.
4. Click **Save**; the message "Changes will only take effect after restarting the software" appears.
5. Click **OK** and then **Close**.

3.2 GST CODES

You have to specify a code to any tax including GST. The phrase "tax code" means a particular tax instead of the code itself throughout the rest of this chapter. In Exact Globe Next, tax codes are maintained at System → General → Countries → Tax codes. You specify a tax code as follows.

To specify a GST code

1. Go to System → General → Countries → Tax codes.
2. Either:
 - Click **New** to create a new tax code.
 - Click the required tax code (row) and then click **Open** to edit it.
3. Fill in the required details (see 2.2.2 *Further Details* that follows).
4. Click **Save** and then **Close**.

3.2.1 Further Details

When specifying a GST code, you need to fill in the details as follows.

Tax code

When creating a new tax code, type in this box a unique code (up to three characters) for the tax. Once it is saved, the box is not available.

Tax type

Select **Sales tax** for the Canadian GST.

Description

Type a suitable description (up to 30 characters) for the tax code

Transaction type

This is only available when creating a new tax code, select one of the following:

- **Both**, if the tax code is applicable to both purchase and sales transactions.
- **Purchase**, if it is applicable to only purchase transaction.
- **Sales**, if it is applicable to only sales transaction.

Percentage

Type the appropriate number for the GST percentage.

Calculation basis

Select either:

- **Net amount**
- **Net amount + Tax**

General Tab**Minimum taxable amount**

Type the minimum taxable amount (invoice amount below which it is not taxable). Use 0.00 if there is no minimum taxable amount.

Maximum taxable amount

Type the maximum taxable amount. Any invoice with amount larger than this is tax at this maximum taxable amount. Use 0.00 if there is no maximum taxable amount. The maximum taxable amount, if not 0.00, must be larger than the minimum taxable amount.

Note:

For more information on minimum and maximum taxable amounts, see document *09.598.884* in your Exact e-Synergy system.

Tax to pay account

Type or select the general ledger account to register GST to be paid.

Tax to claim account

Type or select the code of the general ledger account to register GST to be claimed.

Creditor

Type or select the code of the creditor general ledger account for tax authority. Tax authority is treated as a creditor in the system for paying and claiming GST.

Payment

Select one of the following payment frequencies: **Monthly**, **Quarterly** or **Yearly**.

Log Tab

As for VAT, you can see a log of the changes done to the tax code here.

3.3 LINKING TAX CODES

You link GST codes to the related items, accounts receivable, and general ledger accounts the same way you link VAT codes. It is not necessary to link GST codes to accounts payable, because it is always paid by the customers when they receive the goods and services. When multiple tax codes are involved, you need to do an additional step of typing the state code of the required state. The following are the various dialog boxes related to linking GST codes.

- Do as described in *To link a tax code to a general ledger account* of Chapter 2.

Note:

You can link tax codes to general ledger accounts if the tax module is not used -- that is the **Use tax module** check box under **General ledger settings** is clear (see 2.1 *To do VAT settings*). Once that is done, tax codes are automatically selected when you enter the related transactions into the system.

3.4 ENTERING TAX CODES

You can either manually enter or use the automatic entered or default tax codes (for more information on how the system selects the default tax codes, see *Appendix I: Default Tax Codes*). Once you have entered the tax codes or use the default tax codes, generally, the system immediately does all the tax-related calculations and displays the results on screen. You enter the GST codes the same way you enter VAT codes as described in Chapter 2.

To enter a tax code in a sales order (sales invoice)

4. SALES TAX

This chapter describes the sales tax in USA. The topics are as follows:

- Sales tax settings
- Sales tax codes
- Tax schedule
- Linking tax codes
- Entering tax codes
- Sales tax returns

4.1 SALES TAX SETTINGS

The settings for sales tax of USA are the same as those for GST in Canada. For more information, see [3.1 GST Settings](#).

General ledger settings	
<div>VAT</div>	
Disable VAT	<input type="checkbox"/>
Flexible VAT system	<input type="checkbox"/>
VAT type	Invoice system
Use separate GL to close VAT balances	<input checked="" type="checkbox"/>
GL to report VAT <input type="text" value="1550"/>	<div>Use tax module <input checked="" type="checkbox"/></div> <div>Show: Maximum number of tax codes <input type="text" value="3"/></div> <div>Non-deductible VAT <input type="checkbox"/></div> <div>Assortment for tax use <input type="checkbox"/></div> <div>Item assortment <input type="text" value="Type"/></div>

4.2 SALES TAX CODES

You specify sales tax codes of USA are the same way you specify those for GST in Canada. For more information, see 3.2 *GST Codes*. Note that, in the dialog box, **Expense account** replaces **Tax to claim account** and **Vendor** replaces **Creditor**.

Tax codes

602 File Edit Help

Tax code: ST1 Tax type: Sales tax

General Log

› Tax to pay account: 1515 VAT to pay account

Tax to claim account:

Vendor: 1250006 US Federal Tax Office

Payment: Monthly

Save New Close

4.3 TAX SCHEDULE

You need to set up the tax schedule so that the system can automatically select the specified sales tax codes for you to enter into the system. These specified sales tax codes are known as the default sales tax codes. The following describes how:

- To create a new tax schedule
- To edit a tax schedule
- To delete a tax schedule
- To import a tax schedule
- To batch update a tax schedule

To create a new tax schedule

1. Go to System → General → Countries → Tax schedules and click **New**.
2. In **Tax schedule**, fill in the required details (see 2.2.2 *Further Details* that follows)
3. Either:
 - Click **New** to create another tax schedule.
 - Click **Save** and then **Close**.

To edit a tax schedule

1. Go to System → General → Countries → Tax schedules.
2. Click the required tax schedule (row) and click **Open**.
3. In **Tax schedule**, fill in the required details (see 2.2.2 *Further Details* that follows)
4. Click **Save** and then **Close**.

To delete a tax schedule

1. Go to System → General → Countries → Tax schedules.
2. Click the required tax schedule (row) and click **Delete**.
3. A message appears; click either:
 - **Yes** to delete the tax schedule.
 - **No** to continue without deleting.

To import a tax schedule

1. Go to System → General → Countries → Tax schedules.
2. Click **Import**.

To batch update a tax schedule

Tax

				EUR
Tax code 1	1	VAT 6% excl.	Tax per unit	0.00
Tax code 2	2	BTW 19% excl.	Tax per unit 2	0.00
Tax code 3	3	Vat 6% incl.	Tax per unit 3	0.00
			Sales unit	

Start Close

1. Go to System → General → Countries → Tax schedules and click **Batch update**.
2. In **Tax schedule**, fill in the required details (see 2.2.2 *Further Details* that follows)
3. Click **Save** and then **Close**.

Note:

Through batch update, you can enter a batch of new tax codes and update all existing tax schedules with these new tax codes. Since this is done for all tax schedules, the **Criteria** section in **Basic** tab is not available during batch updating.

4.3.1 Further Details

You need to fill up the details in the **Basics** tab when you create, edit or batch update a tax schedule. The **Log** tab shows the changes done to the tax schedules.

Basics tab

Basics tab contains two sections, **Criteria** and **Tax** sections. The **Criteria** section is only available when creating a new tax schedule. It is not available when editing and batch updating a tax schedule. You fill in the details as follows.

Criteria

The information of country, state, county, city, and postcode to be entered here refers to the delivery address of the item where the selected sales tax code is applicable.

Country code

Type or select the required country code (up to three characters).

State

Type or select the required state code (up to three characters).

County

Type the required county's name (up to 100 characters).

City

Type the required city's name (up to 100 characters).

Postcode

Type the required postcode (up to 30 characters).

Note:

As shown under *Classification* that follows, there are six classifications of taxable items in the USA. Exempted items are not subject to sales tax. You must specify items into these classifications through Inventory → Items → Maintain (or any other menu path to the same destination).

Classification

Select the item classification which the selected sales tax code is applicable from the following:

- Exempted items
- Standard goods
- Food
- Prescription drugs
- Non prescription drugs
- Freights
- Services

Transaction type

Select the transaction type which the selected sales tax code is applicable from the following:

- **Both** for both purchase and sales transactions
- **Purchase**
- **Sales**

Name

This is optional; you enter the invoice account receivable or invoice account payable only when it is specific to the sales tax code.

Item

This is optional; you enter the item only when it is specific to the sales tax code.

Tax

The number of tax codes (**Tax code**, **Tax code 2 ...**) appear here is the value (1 to 5) set for **Show: Maximum number of tax codes** (see 2.1 *To do VAT settings*).

Tax code, Tax code 2 ...

Type or select the required tax codes (up to three characters each).

The **Tax per unit**, **Tax per unit 2 ...** and **Sales unit** boxes are only available when you have entered the specific item in the **Item** box, selected **Sales** in **Transaction type**, and the tax code is of the per-unit type.

Tax per unit, Tax per unit 2 ...

Type the required per-unit tax amount.

Sales unit

Use the default sales unit or type the required sales unit.

Log tab

The **Log** tab shows the changes done to the tax schedules.

4.4 LINKING TAX CODES

Sales items are taxed according to their sales tax classifications. Each sales tax classification, therefore, has a unique tax codes. The following describes how to link the tax codes and sales tax classifications to the sales items.

To link a tax code to an item

1. Go to System → General → Settings, and under **Settings**, click **General ledger settings**.
2. Under **Entry**, clear the **User tax module** check box; click **Save**, **OK**, and **Close**.
3. Go to Inventory → Items → Maintain (or any other ways to the same dialog box).
4. Click to select the required item and click **Open**.
5. In the **Basics** tab, in the **Sales VAT code** box, type or select the required tax code.
6. Click **Save** and **Close**.

To link a sales tax classification to an item

The screenshot shows the '602 Items - Exact' window. The 'Basics' tab is active. The 'Item code' is B0N0005, 'Type' is Standard, 'Status' is Active, and 'From' is 01/28/2011. The 'Description' is 'R.P. Espresso beans 1863' and 'Search code' is 'KOFBONBEA'. The 'Sls. unit, Price' is 'kg' at '23.589 EUR'. The 'Classification (Tax)' is set to 'Food' and is highlighted with a red box. The 'Tax schedule' dropdown is also highlighted. The 'Cost price' is '10.167 EUR / kg', 'Markup' is '132.02 %', and 'Purchase price' is '10.167 EUR / kg'. The 'Assortments' section shows 'Type' as 'Products', 'Product Group' as 'Coffee', and 'Sort' as 'Beans'. The 'Attributes' section has 'Text' checked and 'Divisible' unchecked. The 'Text' field contains a description of the espresso beans. The bottom toolbar includes buttons for WMS, Graph, MRP, Card, Production or..., Purchase orders, Sales orders, Save, New, and Close.

1. Go to System → General → Settings, and under **Settings**, click **General ledger settings**.
2. Under **Entry**, select the **User tax module** check box; click **Save**, **OK**, and **Close**.
3. Go to Inventory → Items → Maintain (or any other ways to the same dialog box).
4. Click to select the required item and click **Open**.
5. In the **Basics** tab, in the **Classification (Tax)** box, select the required sales tax classification; the options available are:
 - Exempted items
 - Standard goods
 - Food
 - Prescription drugs
 - Non-prescription drugs
 - Freight
 - Services
6. Click **Save** and **Close**.

Note:

The **Classification (Tax)** field replaces the **Sales Tax code** field, when you select the **Use tax module** check box.

4.5 ENTERING TAX CODES

Once all the tax schedules have been set up, when you enter a related entry, the system automatically selects the correct tax schedule for the sales tax codes for the entry. The automatically selected tax schedule is known as the default tax schedule. How the system selects the default tax schedules is described in *Appendix I - Default Tax Codes*. Generally, you enter the sales tax codes the same way you enter VAT as described in Chapter 2.

To enter a tax code in a sales order (sales invoice)

The screenshot shows the '602 Sales invoices - Exact' window. The form includes fields for Invoice code (10), Ordered by (31852), Delivery to (31852), Invoice to (31852), and various reference and date fields. A table lists items with their descriptions, quantities, and prices. A summary table at the bottom right shows the total net amount, taxes, and total amount.

Item	Description	Wrh.	Price list	Quantity	Unit	Fulfilment date	Sales price	TAX	Amount	Amount incl. VAT	Serial/batch
1	ASS Assembly	1	SALESPRICE	50.000	hour	02/21/2017	70.000	2	3,500.00	4,165.00	
2	00 Payment within 30 days	1		1	-	02/21/2017	0.000	2	0.00	0.00	

Quoted	Ordered	Confirmed	Fulfilled	Shipped	Printed	Invoiced	Authorised	Processed	Paid	Net	3,500.00 EUR
										Taxes	665.00 EUR
										Specific	0.00 EUR
										Total	4,165.00 EUR

- Do as described in *To enter a tax code in a sales order (sales invoice)* of Chapter 2.

4.6 SALES TAX RETURNS

For US and Canada, the users file in their final sales tax returns on their own. Exact Globe Next provides these users with a generic tax report through Finance → Reports → Tax report.

To print a sales tax report

5. TAX WITHHOLDING

Tax withholding is a method of paying certain tax to the authority. In this case, it is the duty of the purchaser that receives the taxable goods or services to withhold the tax amount. When paying the supplier, the purchaser deducts the tax amount from the invoice amount and withholds it for the tax authority. Among the countries that practice tax withholding are the Netherlands, Portugal, Spain, Thailand, and USA. The following describes how Exact Globe Next handles the tax withholding processes in the USA and the Netherlands.

This chapter covers the following topics:

- Tax withholding settings
- Tax codes
- Tax withholding in other countries

5.1 TAX WITHHOLDING SETTINGS

You must use the tax module to enable the system to handle tax withholding. For more information on using tax module, see 2.1 *To do VAT settings*.

5.2 TAX CODES

You specify tax codes for tax withholding the same way you specify those for VAT. For more information, see VAT Codes at 2.1 *Value Added Tax (VAT)*. Except that, in the **Tax type** box, you select **Withholding**.

You link tax codes for tax withholding to sales and purchase items, and accounts receivable and payable, the same way you link multiple VAT codes (when you use tax module). Once you have linked the tax codes, how the system selects the default tax codes for tax withholding is the same as how it selects default multiple VAT codes (see *Appendix I: Default Tax Codes*).

70

To link withholding tax codes to a sales item

- Do as described in *To link multiple tax codes to a sales item* of Chapter 2.

The screenshot shows the '007 Items - Exact' window. The 'Basics' tab is active. The 'Sales VAT code' is set to 'WT1' and 'Withholding tax 10%'. A red box highlights the 'Multiple taxes' button. The 'Cost price' is 5,000 EUR, 'Markup' is 100.00%, and 'Purchase price' is 5,000 EUR. The 'Assortments' section shows 'Type', 'Productgroep', and 'Soort' dropdowns. The 'Attributes' section shows 'Text' and 'Divisible' checkboxes. The 'Description NL' field is empty.

The following shows the tax schedule after you click the **Multiple taxes** button.

The screenshot shows the 'Tax schedule' window. The 'Criteria' section shows 'Country code' as 'NL', 'Transaction type' as 'Sales', and 'Item' as 'IBTMAKE'. The 'Tax' section shows three tax codes: 'WT1' (Withholding tax 10%), 'WT2' (Withholding tax 20%), and 'WT3' (Withholding tax 30%). The 'Tax per unit' column shows '0.00' for each tax code. The 'Sales unit' column is empty.

To link withholding tax codes to a purchase item

- Do as described in *To link multiple tax codes to a purchase item* of Chapter 2.

1. Go to System → Countries → Tax schedule.
2. From the list, either:
 - Click to select the required tax schedule (row) and click **Open**.
 - Double-click the required tax schedule.
3. In **Tax schedule**, in the **Basics** tab, fill in the required details.
4. Click **Save**.

You enter tax codes for tax withholding in sales order (sales invoice), sales journal entries, purchase order, purchase journal entries, and general journal entries the same way you enter multiple VAT codes (see 2. *Value Added Tax (VAT)*). The system selects the default tax codes for tax withholding the same way it selects the default multiple VAT codes (see *Appendix I: Default Tax Codes*). Once you have entered or selected the default tax codes, the system automatically calculates and fills in tax-related items in the entry.

Note:

A tax code for tax withholding provides the amount of tax to be withheld, and generally it involves a set of multiple tax codes.

The following shows how you enter tax codes for tax withholding in the related entries.

To enter tax codes for tax withholding in a sales order (sales invoice)

- Do as described in *To enter multiple tax codes in a sales order (sales invoice)* of Chapter 2.

5.3 TAX WITHHOLDING IN OTHER COUNTRIES

Read the following document (in your Exact e-Synergy system) for information on tax withholding in other countries.

Document ID	Document title and description	Countries applicable
09.599.225	Tax Withholding and Tax Invoices in Thailand	Thailand
09.598.253	Tax Withholding in Spain and Portugal	Spain and Portugal

6. PER-UNIT TAXING

There are taxes that are calculated basing on the sales quantity - the number of units sold - instead of on a percentage of the sales amount. Such method of per-unit taxing is found in ecological taxes, where taxes are imposed for ecological reasons. Exact Globe Next supports the per-unit taxing method for countries where it applies through a special tax module that handles a number of taxes.

This chapter describes the per-unit taxing method in the USA and other countries and it covers the following topics:

- Per-unit tax settings
- Per-unit tax codes
- Per-unit tax returns

6.1 PER-UNIT TAX SETTINGS

You must use the tax module to enable the system to handle per-unit taxing method. For more information on using tax module, see 2. 1 *To do VAT settings*.

Use separate GL to close VAT balances ☒

GL to report VAT 1550

Use tax module ☒

Show: Maximum number of tax codes 3

Non-deductible VAT ☐

Assortment for tax use ☐

Item assortment Type

6.2 PER-UNIT TAX CODES

You specify per-unit tax codes the same way you specify those for VAT. For more information, see 2.2 *VAT Codes*. Except that, in the **Tax type** box, you select **Tax per unit**. Per-unit tax is only applicable for sales transactions, therefore, the system has selected the **Transaction type** to be **Sales** and you cannot change it. The **Percentage**, **Tax % description**, **Calculation Basis**, and **Tax to claim account** boxes are not available because they are not applicable to per-unit tax.

6.2.1 Linking US Per-unit Tax Codes

How you link per-unit tax codes to sales items depends on which countries the per-unit tax is applicable. For the USA, you link per-unit tax codes and their individual per-unit tax amounts to the sales tax classifications in the tax schedule for sales tax through System → General → Countries → Tax schedules (see 4.3 *Tax Schedule* and images that follow)

System > General > Countries > Tax schedule >

Refresh Filter Columns

6.2.2 Linking Non-US Per-unit Tax Codes

For other countries, you link the per-unit tax codes and their individual per-unit tax amounts to the sales items in the tax schedule (see 2. *Value Added Tax (VAT)*, 3.3 *To link multiple tax codes to a sales item* and the images that follow), except that you have to type the corresponding per-unit tax amounts in the **Tax per unit** boxes.

The screenshot shows the '602 Items - Exact' dialog box. The 'Sales VAT code' field is set to '4' and 'Vat 19% incl.'. A red box highlights the 'Multiple taxes' button. The 'Purchase price' is 28.600 EUR / Box. The 'Sales unit, Price' is Box 56.840 EUR. The 'Description NL' is 'Filterrol 89 mm'.

Note that you can edit the details of an existing tax schedule but you cannot create another new tax schedule from this **Tax schedule** dialog box because there is no **New** button.

The screenshot shows the 'Tax schedule' dialog box. The 'Country code' is 'NL' (Netherlands). The 'Transaction type' is 'Sales'. The 'Item' is 'DIV0003' (Filter roll 89 mm). The 'Tax code' is 'TU1' with a 'Tax per unit' of 100.00 EUR. The 'Sales unit' is 'Box'.

The **Tax per unit** boxes are only available, when:

- In **Tax schedule**, in the **Transaction type** box, select **Sales** and not Both or **Purchase**; per-unit tax is not applicable to purchase transactions.
- Under **Tax**, in the corresponding **Tax code** boxes, select tax codes of the **Tax per unit** type and not **VAT**, **Withholding**, or **Sales** type; you specify tax code types through System → General → Countries → Tax codes → Maintain tax codes.

The system displays the default currency above the **Tax per unit** boxes. When you have typed an amount in at least one of the **Tax per unit** boxes, the system displays the sales unit applicable in the **Unit** box. You cannot change the sales unit displayed.

Note:

When you change the sales unit, the system automatically updates the per-unit tax amounts according to the new sales unit. For example, the per-unit tax amount is 120 euros per box. You change the sales unit from a box to a piece. And 1 box = 12 pieces. Then the system automatically changes the per-unit tax amount to 10 euros.

6.2.3 Entering Per-unit Tax Codes

You enter per-unit tax codes in sales orders (sales invoices), sales journal entries, purchase orders, purchase journal entries, and general journal entries, the same way you enter other tax codes. Once you have entered or selected the default per-unit tax codes, the system calculate the tax amounts based on tax per unit multiplied by quantity in sales units (tax amount = tax per unit × quantity).

6.3 PER-UNIT TAX RETURNS

Per-unit tax is a type of sales tax, and like sales tax, the users file in their final per-tax returns on their own. Exact Globe Next provides these users with a generic tax report through Finance → Reports → Tax report (see also 4.6 *Sales Tax Returns*).

7. MULTIPLE INDIRECT TAX TYPES

The tax module of Exact Globe Next allows you to enter different types of indirect tax in an sales or purchase entry.

This chapter shows how you can do that and it covers the following topics:

- Using tax module
- Different tax schedules
- US tax schedules
- Non-US tax schedules

7.1 USING TAX MODULE

You must use the tax module to enable the system to handle multiple indirect tax types. For more information on using tax module, see 2.1 To do VAT settings.

7.2 DIFFERENT TAX SCHEDULES

Different countries use different tax systems, therefore, different types of indirect tax appears in the tax schedules of different countries. Exact Globe Next provides the following two types of tax schedule and the available types of indirect tax:

- US type -- Sales tax, withholding tax, and per-unit tax
- Non-US type -- VAT, GST, withholding tax, and per-unit tax

For both type the tax schedules, you create and maintain tax schedules through System → General → Countries → Tax schedules.

7.3 US TAX SCHEDULES

For more information on US tax schedules, refer to the following chapters:

- Chapter 4, "Sales Tax"
- Chapter 5, "Tax Withholding"
- Chapter 6, "Per-unit Taxing"

The following shows a list of US tax schedules with sales tax classification of standard goods and multiple sales tax codes.

7.4.1 Linking to Sales Items

The following two images show how you can link multiple indirect taxes to a sales item.

The screenshot shows the '602 Items - Exact' window. The 'Basics' tab is active. The 'Item code' is '12M', 'Description' is 'Strawberry Body Butter', and 'Search code' is '12M'. The 'Type' is 'Standard', 'Status' is 'Active', and 'From' is '01/13/2017'. The 'Sales VAT code' is 'W2' and 'Withholding tax 20%'. The 'Multiple taxes' button is highlighted. The 'Assortments' section shows 'Type', 'Product Group', and 'Sort'. The 'Attributes' section shows 'Text' and 'Divisible' checkboxes. The 'Text' field is empty. The 'Description NL' field is also empty. The bottom bar contains buttons for 'WMS', 'Graph', 'MRP', 'Card', 'Production or...', 'Purchase orders', 'Sales orders', 'Save', 'New', and 'Close'.

In **Items**, click the **Multiple taxes** button; in **Tax schedule**, enter the required tax codes (showing a combination of withholding tax, VAT, and GST).

The screenshot shows the 'Tax schedule' window. The 'Criteria' section includes 'Country code' (NL), 'Transaction type' (Sales), 'Account classification', 'Account', 'Item' (12M), and 'Extra charges'. The 'Tax' section lists 'Tax code' (W2, 2, G10) and 'Tax per unit' (0.00). The 'Sales unit' field is empty. The bottom bar contains buttons for 'Save', 'New', and 'Close'.

7.4.2 Linking to Purchase Items

The following two images show how you can link multiple indirect taxes to a purchase item.

The screenshot shows the '602 Items by supplier - Exact' window. The 'Purchase' tab is active. The 'VAT' field is set to 'W2' and 'Withholding tax 20%'. The 'Multiple taxes' button is highlighted with a red box. The 'Sales' tab is also visible, showing 'Sales unit' as 'Bottle' and 'Purchase price' as '0.000 EUR / Bottle'.

In **Items by supplier**, click the **Multiple taxes** button; in **Tax schedule**, enter the required tax codes (showing a combination of withholding tax, VAT, and GST).

The screenshot shows the 'Tax schedule' window. The 'Criteria' section is expanded, showing 'Country code' as 'NL' (Netherlands), 'Transaction type' as 'Purchase', 'Account classification' as 'Nicole Looman', and 'Item' as '12M' (Strawberry Body Butter). The 'Tax' section is also expanded, showing 'Tax code' as 'W2' (Withholding tax 20%), 'Tax code 2' as '3' (Vat 6% incl.), and 'Tax code 3' as 'G10' (GST 10%). The 'Tax per unit' column shows '0.00' for all three tax codes. The 'Sales unit' is set to 'Bottle'.

7.4.3 Linking to Accounts Receivable

The following two images show how you can link multiple indirect taxes to an account receivable.

APPENDIX 1: DEFAULT TAX CODES

Once you have linked the tax codes to the relevant items, accounts receivable, accounts payable, and general ledger accounts, they are automatically selected when you enter related transactions, such as sales orders or sales invoices, and sales journal entries, purchase orders and purchase journal entries, and general journal entries, into the system. The following describes how the system selects the default tax codes of various types of tax.

VAT

For value added tax (VAT), how the system selects the (so-called "default") tax codes depends on whether you have selected or cleared the **Use tax module** check box under **General ledger settings** (see *2.1 VAT Settings*). When you have selected the check box, the tax module and multiple tax codes are in use. When you have cleared the check box, the tax module is not in use and only single tax codes are involved.

Single Tax Codes

For single tax codes of VAT, the system selects the default tax code basing on a sequence. For example, for a sales journal entry, that sequence is as follows:

- Item
- Account receivable
- General ledger account.

That is if the tax codes linked to the related item is available, it is chosen as the tax code to appear in the transaction entry. If it is absent or it is 0%, the tax codes linked to the related account receivable or account payable are selected. If these are again not available, those linked to the related general ledger account are selected. If there is no linked tax code, no default tax code is selected. The sequences for other entries are given in the table that follows. If necessary, you can enter another tax code to replace the default tax code. For a sales journal or purchase journal entry the item quantity must be entered otherwise the tax code of account receivable or account payable, if available, is selected.

A summary of how the system selects the single tax codes of VAT are as follows.

Entry type	First choice	Second choice	Third choice
Sales order (sales invoice)	Account receivable	Item	
Sales journal entry	Item*	Account receivable	General ledger account
General journal entry for a sales invoice	Account receivable	Revenue G/L account	
Purchase order	Item per supplier	Account payable	
Purchase journal entry	Item per supplier*	Account payable	General ledger account
General journal entry a for purchase invoice	Account payable	Cost G/L account	

* The quantity must be filled in the entry then only the VAT code linked to item is selected; if not the VAT code linked to account receivable or account payable is selected.

G/L - general ledger

Multiple Tax Codes

When you have selected the **Use tax module** check box, multiple tax codes are used in the system. The following describes how the system selects the default sets of multiple tax codes for the various taxes.

- For sales related entries, those in the tax schedule first, then the related item and finally the related account receivable.
- For purchase related entries, those linked the account payable (therefore, tax codes must be linked to the account payable).

If there are no linked multiple tax codes, no default tax codes are selected. If necessary, you can enter another tax code to replace any default tax code.

A summary of how the default multiple tax codes for VAT are selected is given in the following.

Entry type	Are tax codes available?			Transaction type	Multiple tax codes selected from
	Item	Account receivable	Account payable		
Sales order (sales invoice). Sales journal entry, or general journal entry for a sales invoice	Yes	Yes	NA	Both for Sales	Tax schedule
	Yes	No	NA		Item
	No	Yes	NA		Account receivable
Purchase order, purchase journal entry, or general journal entry for a purchase invoice	Yes	NA	Yes	Both or Purchase	Account payable
	Yes	NA	No		Not allowed
	No	NA	Yes		Account payable

NA - not applicable

GST (Canada)

For GST of Canada and for entries involving single tax codes, how the system selects the default tax codes is similar to that for VAT. The following table is a summary.

Entry type	First choice	Second choice	Third choice
Sales order (sales invoice)	Item		
Sales journal entry	Item*	Account receivable	General ledger account
General journal entry for a sales invoice	Account receivable	Revenue G/L account	
Purchase journal entry	Item per supplier*	Account payable	General ledger account
General journal entry a for purchase invoice	Account payable	Cost G/L account	

* The quantity must be filled in the entry then only the tax code linked to item is selected; if not the tax code linked to account receivable or account payable is selected.

G/L - general ledger

For entries involving multiple tax codes, the system selects the default tax codes by matching the details in the entry with those in the tax schedule (see the table that follows). In Canada, GST and hence the tax codes concerned are always based on account receivable and the delivery address (state) and not the supplier's address.

Entry type	Are tax codes available?				Tax codes selected from
	Item	Account receivable	Account payable	Account payable	
Sales order (sales invoice) or sales journal entry	Yes	Yes	NA	Yes	Tax schedule
	Yes	No	NA	Yes	Item
	Yes	Yes	NA	No	Account receivable
	Other cases				No default
Purchase order or purchase journal entry	Yes	NA	Yes	Yes	Tax schedule
	Other cases				No default

NA - not applicable

Sales Tax (USA)

For sales tax in USA and for entries involving single tax codes, the following table summarizes how the system selects the default tax codes.

Entry type	First choice	Second choice
Sales order (sales invoice)	Item	
Sales journal entry	Item*	Revenue G/L account
General journal entry for a sales invoice	Revenue G/L account	
Purchase order	Item per supplier	
Purchase journal entry	Item per supplier*	Cost G/L account
General journal entry for a purchase invoice	Revenue G/L account	

*The quantity must be filled in the entry then only the tax code linked to item is selected; if not the tax code linked to revenue G/L account or account payable is selected.

G/L - general ledger

For an entry involving multiple tax codes, the system selects the default tax codes by finding the tax schedule with details that best match the details in the entry.

The details involved are:

- Tax item classification
- Delivery address - country, state, city, county (optional), and postcode
- Invoiced account receivable or account payable (optional; entered in the **Name** box)
- Item (optional)

The system selects the default multiple tax codes as follows:

If there is a tax schedule which has all its details matching the details in the entry (a perfect match), the system selects the default tax codes from that tax schedule. Therefore, it is necessary that each tax schedule is unique. You use the **Name** and **Item** boxes to specify the tax schedules for specific invoiced accounts receivable or accounts payable and specific items.

If there is no perfect match, then:

- If the tax item classifications do not match then there are no default tax codes.
- If the tax item classifications match then the system look for the best match of the delivery address components in the following order: country, state, city, city, and postcode to select the tax schedule.

For purchase order, quotation, sales order, or sales invoice, the system first checks whether tax is exempted basing on the invoice address before it proceeds to selecting the default tax codes basing on the delivery address. You specify the tax-exempt status of the accounts through CRM → Accounts → Maintain accounts.

For purchase journal entries and general journal entries for purchase invoices, you must specify the items. This prevents the system from unnecessarily assigning default tax codes to entries for transactions not subject to taxation but involving accounts receivable or accounts payable. The system automatically selects the tax codes only when you first enter the item code. If you change the item code later, there is no change to the tax codes and no recalculation of tax.

Tax Withholding

For tax withholding, the system selects the default tax codes the same way it selects default multiple VAT codes (*see VAT, Multiple Tax Codes*).

APPENDIX 2: PRODUCT UPDATE CHANGES

Product Update	Chapter
